Office Action Summary	Application No. 09/889,955	Applicant(s) NAGATA ET AL.	
	Examiner Edward J. Cain	Art Unit 1714	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nagata et al in view of Yano et al.

Nagata et al disclose highly absorbent resin particles comprising a water absorbent core particle coated with a broad variety of thermoplastic polymers (abstract). The water absorbent core is taught as suitably crosslinked acrylate methacrylate copolymers (column 2, line 50) while the thermoplastic polymer used as the coating is to be selected from a broad spectrum of polymers as listed at column 3, lines 21-35. This reference fails to explicitly recite applicants claimed ethylene glycidyl (meth)acrylate as the thermoplastic polymer.

The Yano et al reference teaches the use of ethylene glycidyl methacrylate copolymers in similar water absorptive resin compositions.

Therefore, it would have been obvious to one of ordinary skill in the art to select the ethylene glycidyl methacrylate copolymer taught by the secondary reference as the thermoplastic polymer required by the primary reference since the primary reference allows for a broad spectrum of polymers including methacrylate copolymers.
